CAREER OBJECTIVE

Aspiring Generative AI Engineer with a strong foundation in Machine Learning, Deep Learning, and Large Language Models. Passionate about building and fine-tuning LLM-based systems, working with transformers, and applying GenAI techniques such as prompt engineering, instruction tuning, and retrieval-augmented generation to solve real-world problems.

EDUCATION

Rajiv Gandhi University of Knowledge Technologies, Ongole
Bachelor of Technology (B.Tech), Computer Science and Engineering

2023 – Present
CGPA: 8.7

TECHNICAL SKILLS

- **ML / DL:** TensorFlow, Scikit-learn, PyTorch
- **Languages:** C++, Python
- **Data Processing:** NumPy, Pandas, Matplotlib, Seaborn
- **Databases:** SQL, MongoDB
- **Web Technologies:** Node.js, Express.js, EJS (MERN Stack)
- **Core Areas:** DSA, Competitive Programming, AI/ML

PROJECT EXPERIENCE

Mini-GPT-From-Scratch-Using-Pytorch

- Implemented a GPT-style Transformer from scratch in PyTorch, including custom attention, LayerNorm, GELU, and training loops.
- Built a complete autoregressive decoding pipeline with top-k and temperature sampling.
- Manually loaded GPT-2 pretrained weights by mapping QKV, FFN, and LayerNorm parameters without HuggingFace.
- Demonstrates deep understanding of LLM internals, architecture, and inference mechanics.

Sign-Language-Detection-using-YOLOv5

- Developed an end-to-end real-time American Sign Language (ASL) recognition system using **YOLOv5** for object detection.
- Converted a large ASL image classification dataset into YOLO-compatible bounding box annotations for detection-based learning.
- Trained a YOLOv5 model using transfer learning to detect hand signs by predicting bounding boxes, class labels, and confidence scores in a single forward pass.

Chest-Cancer-Classification-Using-MLflows-DVC

- Built a production-ready deep learning pipeline for chest cancer classification from medical CT images using CNN-based architectures.
- Applied transfer learning with pretrained **VGG16** to improve performance on limited medical imaging data.
- Implemented MLOps best practices including experiment tracking with **MLflow**, dataset and model versioning using **DVC**, and structured artifact management.

Achievements

- Solved 600+ problems on LeetCode with a rating of 1634 and a 182-day streak.
- Solved 150+ problems on GeeksforGeeks and 80+ on CodeForces
